Jake,

We talked about taking samples before the water fall and after the water fall of that specific site.

Regards,

Juan de Dios

Juan,
I don't think that is on EPA radar. It is an AML issue right now.
Jake

Justin,

The house with the water coming from the side of the hill. I think the site was named mine #2 or Moe's house.

Regards,

Juan,

What do you mean by "the house with the mudslide?" I will work on answering your other questions.

Thanks,

Hi Justin,

Last Thursday a manager for AML and I went for a site inspection in Minden. We found two portals on the Berwyn Land Co property. We have marked the locations for two sediments samples (total 4 possible samples). Also, we visited the house with the mudslide. How do you want the locations identified for you – latitude & longitude or shapefile?

Regarding Needles eye I have two basic questions:

1. How many samples do you plan to take? and
2. How do you plan to sample?

The Needles Eye location is approximately 3.5 acres. I suggest the use of the LiDAR for feature extraction, for the other area of Needles Eye to use a grid or randomly generated locations, kind of a hybrid model.

I have most of the work done for the sample location, please let me know what you want me to do.

Regards,

Juan de Dios Barrios, Ph.D., GISP.

Hi Juan,

I hope you've been well. Have you had the chance to talk to the AML program and nail down the locations of the Needleseye mine portals?

Thanks,
